## Occupational Health and Safety

Tracking occupational health indicators allows Maryland to identify trends and patterns of work-related injury, illness, and death

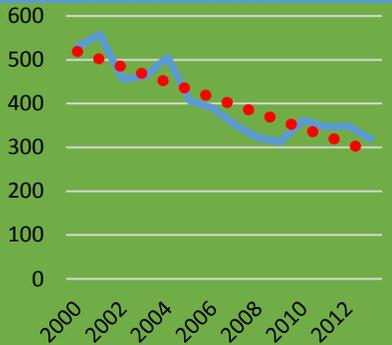

According to the 2000 to 2013 occupational health tracking data, Maryland has seen substantial decreases in the following work-related injuries and illnesses rates:

1. **Indicator 1.1 & 1.2:** All work-related **Injuries** and **Illnesses**
2. **Indicator 2:** All work-related **Hospitalizations**
3. **Indicator 7.1-7.2, 7.4:** Work-related **Musculoskeletal** disorders reported by private sector employers
4. **Indicator 9.1-9.4:** Work-related **Pneumoconiosis** hospitalizations

Rate of non-fatal work-related injuries and illnesses per 100,000 Workers – **Indicator 1.1**

Rate of work-related musculoskeletal disorders involving days away from work per 100,000 Workers – **Indicator 7.1**

44%

2000

2013

Disorders of the Back  
**Indicator 7.4**

60%

2000

2013

Coal Workers' Pneumoconiosis  
**Indicator 9.2**
